

Hi there!

Thank you using the “ Web CV Builder!”

Hope you will enjoy our service.

This service is being provided to you absolutely free of any charges!

To get your website , please follow the steps:

- Download the supporting files needed for the website from [here](#)
- Extract the files in in a folder
- In the same folder, copy the <your-name>.html sent to you by email and rename it to **index.html**.

You should have a similar looking directory structure

To check your website, simply open the index.html file with a Web Browser (For best results, use an updated version of Chrome or Firefox)

If everything has proceeded smoothly, you should have a nice looking portfolio ready!

Before you proceed ahead, we would like to request you for a favor. We are providing this simple yet

an important addition to your application for free and in return just ask if that if you did like the service, would you please give us a shoutout on LinkedIn using the tag **#webcvbuilder** in the post? It would be greatly appreciated and will motivate us to work on similar projects just for you! Too lazy to write your own post. Let us to do the job for you!

Share us by [clicking here!](#)

Now coming back to business!

First things first! Replace the profile.jpg with your own picture [Please note that the name of your picture should be 'profile' and format has to be 'jpg']

Now let's get to hosting your website!

If you do have a web hosting service available, then go ahead and upload the contents and enjoy the website!

If you don't, follow this article on “[Website Hosting on GitHub in 4 easy steps](#)”

Hope you love your new website! Have ideas for the webpage? Go ahead and play around with the webpage code to further personalize your website! Or just send us feedback on the <http://webcvbuilder.pythonanywhere.com/>
